CREATE CHANGE

Online inter-organisational relationships in the disability service sector

Paul Henman | Associate Professor

Centre for Policy Futures & School of Social Science

Dan Dai | Research Officer

School of Social Science

Challenge

In order to ensure joined up disability support services, organisations need to collaborate.

How do organisations collaborate?

Approach

- In an online world, organisations host websites and use these for sharing information and connections.
- Hyperlinks between organisational websites may indicate organisational collaborations.
- Complement offline relationships.

Methods

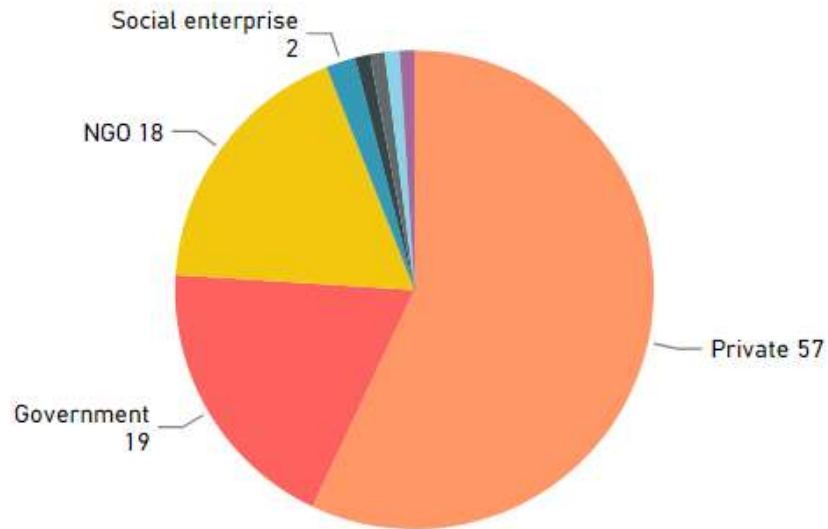

- Web crawling and hyperlink analysis
 - Crawl the full website of seed websites for all outgoing hyperlinks
- Visualisation of network

Seed websites (100 random NDIS registered service providers)

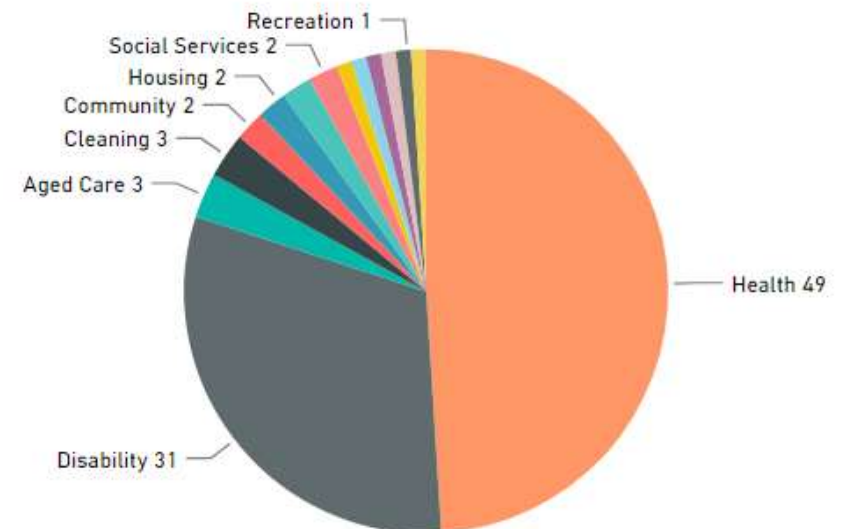

- Geography: National, State, Local
- Type: Government, Private, NGO, Social enterprise, Advocacy NGO, Peak Body
- Sector: Disability, Health, Social Services, Aged Care, Community, Education, Finance, Housing, Recreation, Technology etc.
- Focus: Hospital and Health Services (HHS), Advocacy, Support services, Audiology, Occupational Therapy, Psychology, Medical supplies, Equipment etc.

Seed websites (100)

Composition by Type

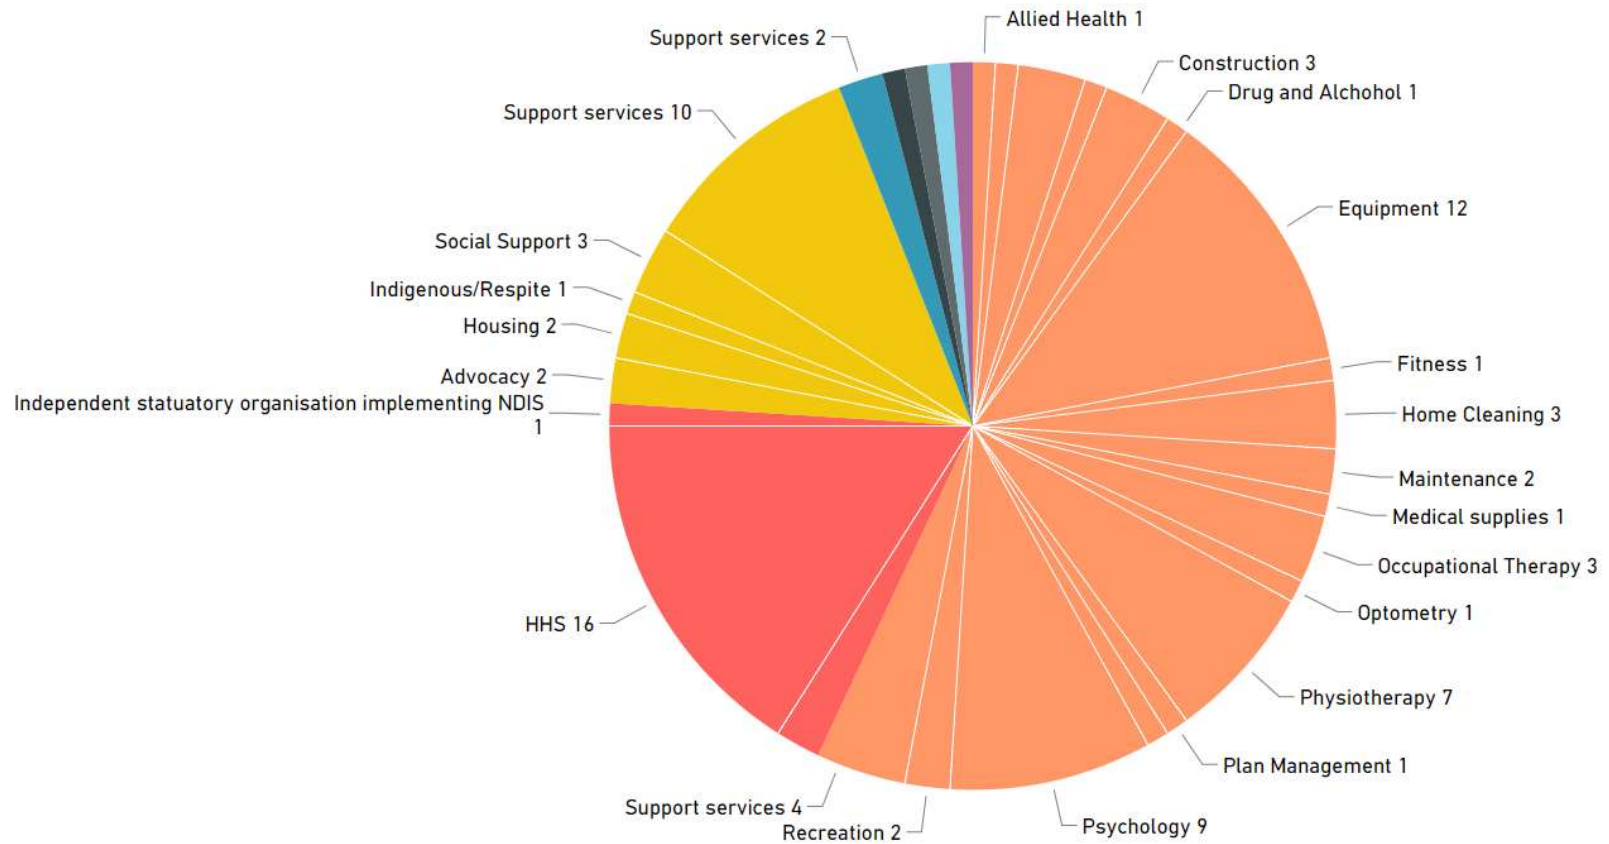

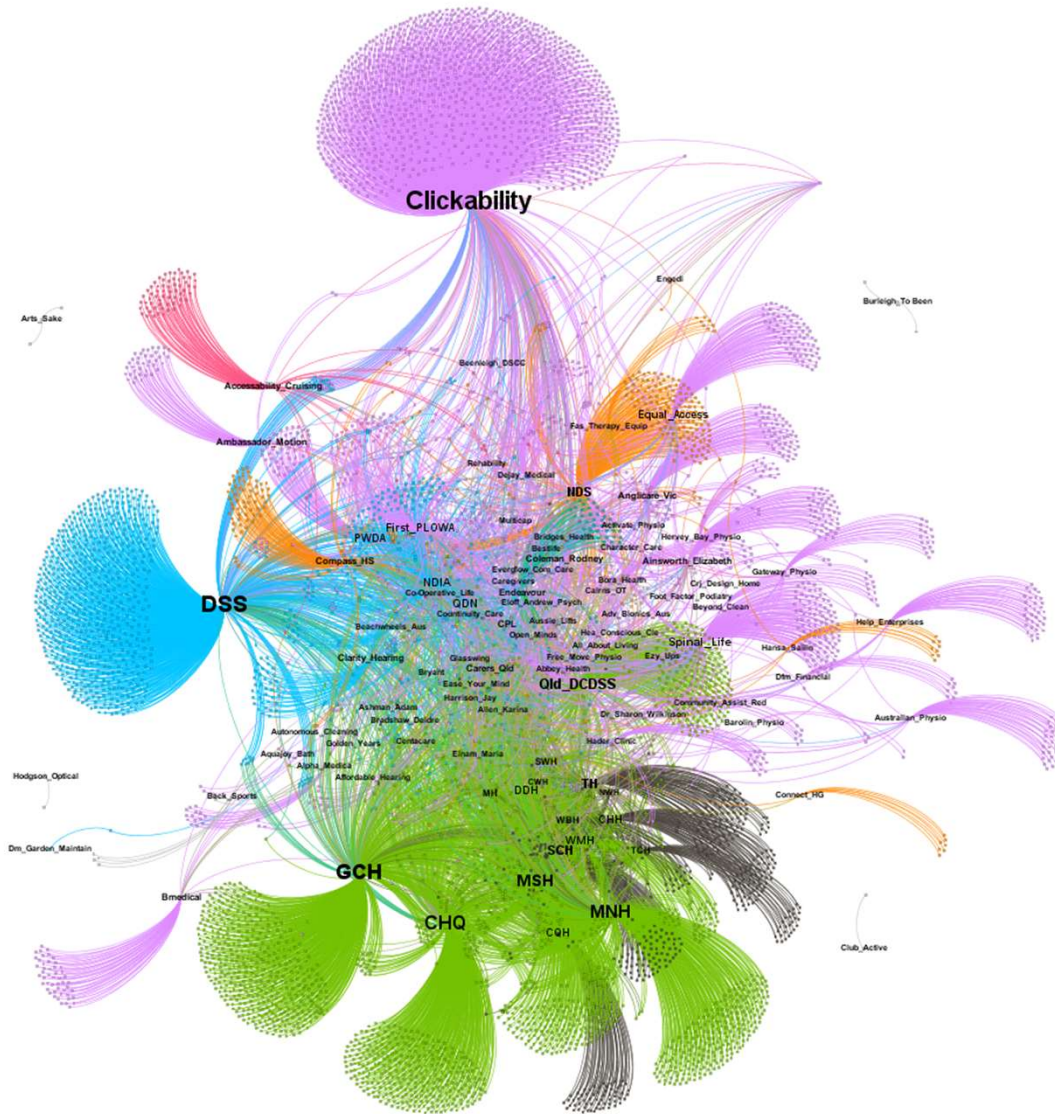

Composition by Sector

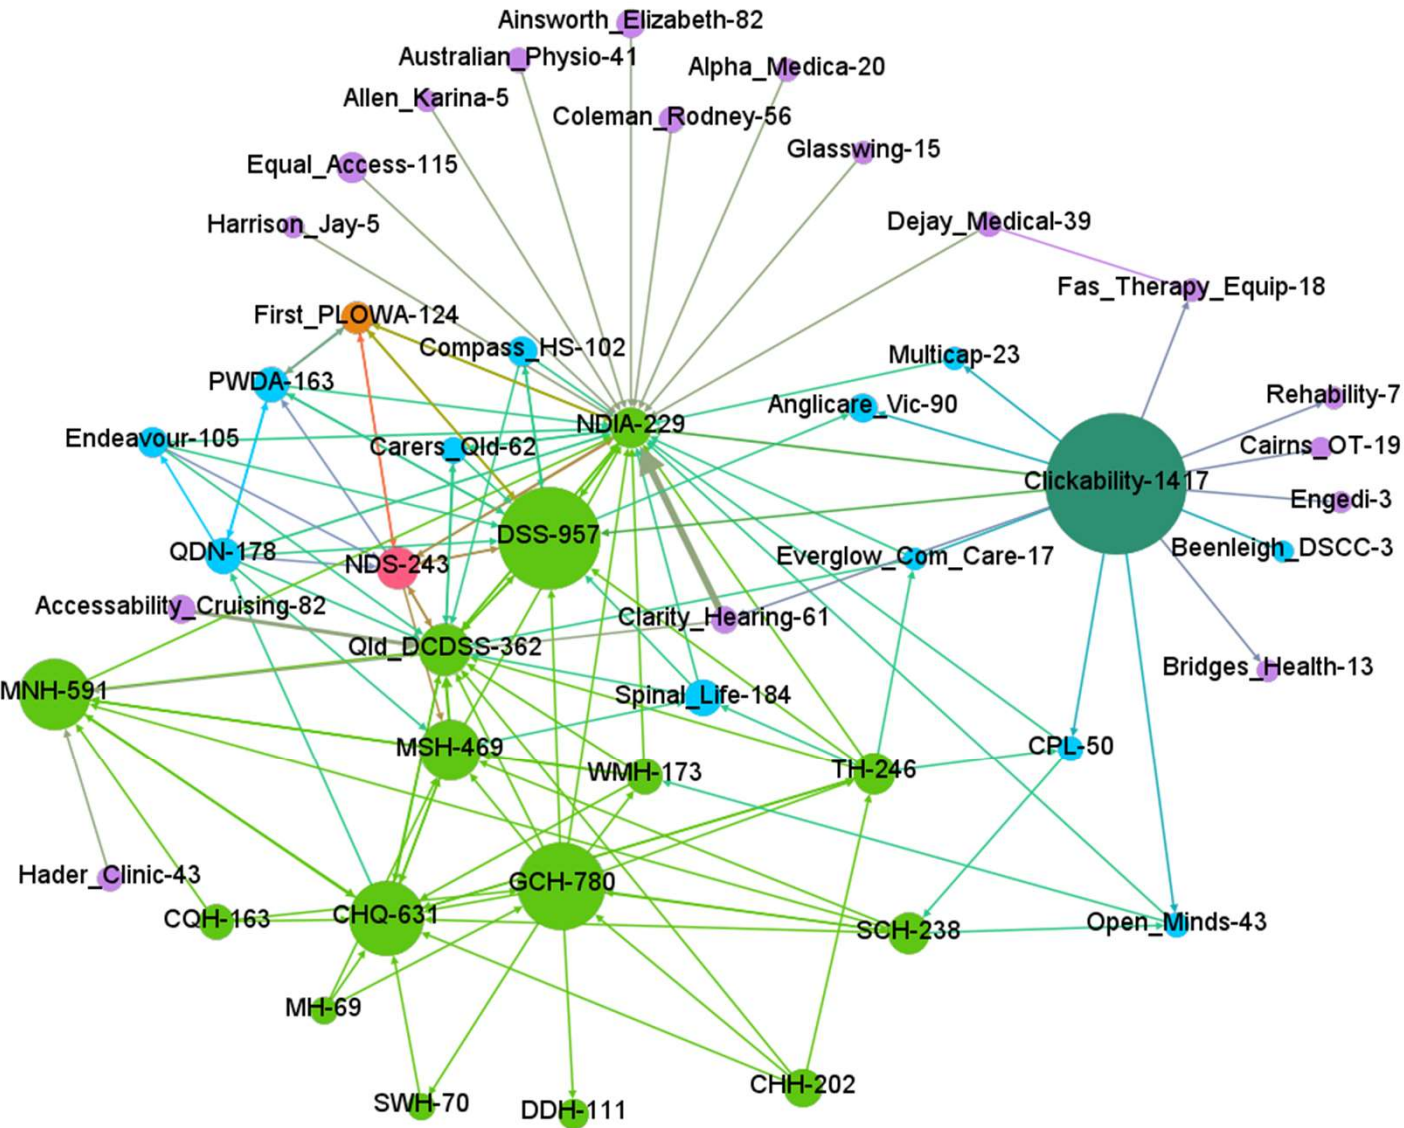

Seed websites (100) Types & Focus

Type ● Private ● Government ● NGO ● Social enterprise ● Advocacy NGO ● NGO (Charity) ● Peak Body ● Private (Consultation)

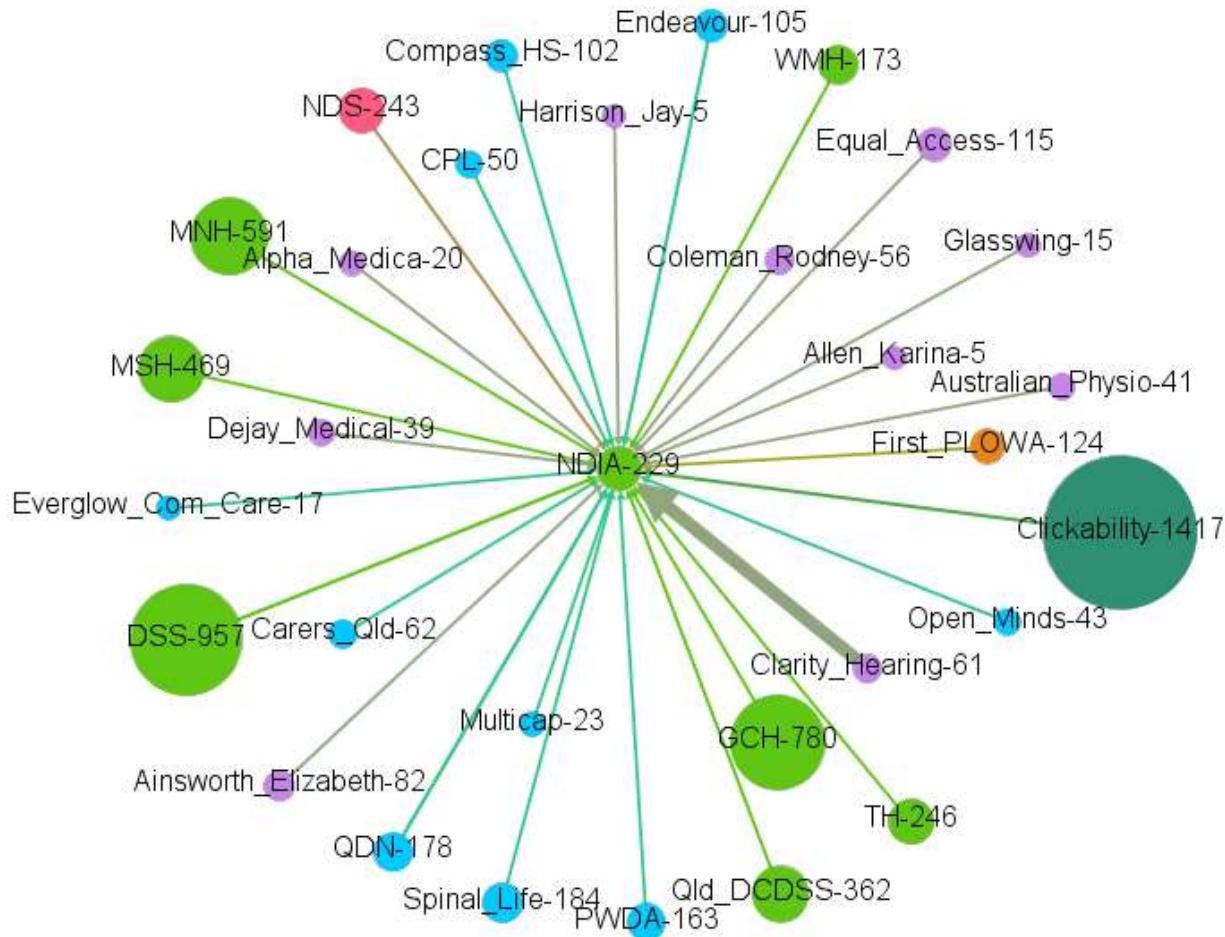

Total Seed Website	Size	Edges	Density
100	6,113	9,298	0.000249

Operation types (by Degree)

Max: Clickability 1417

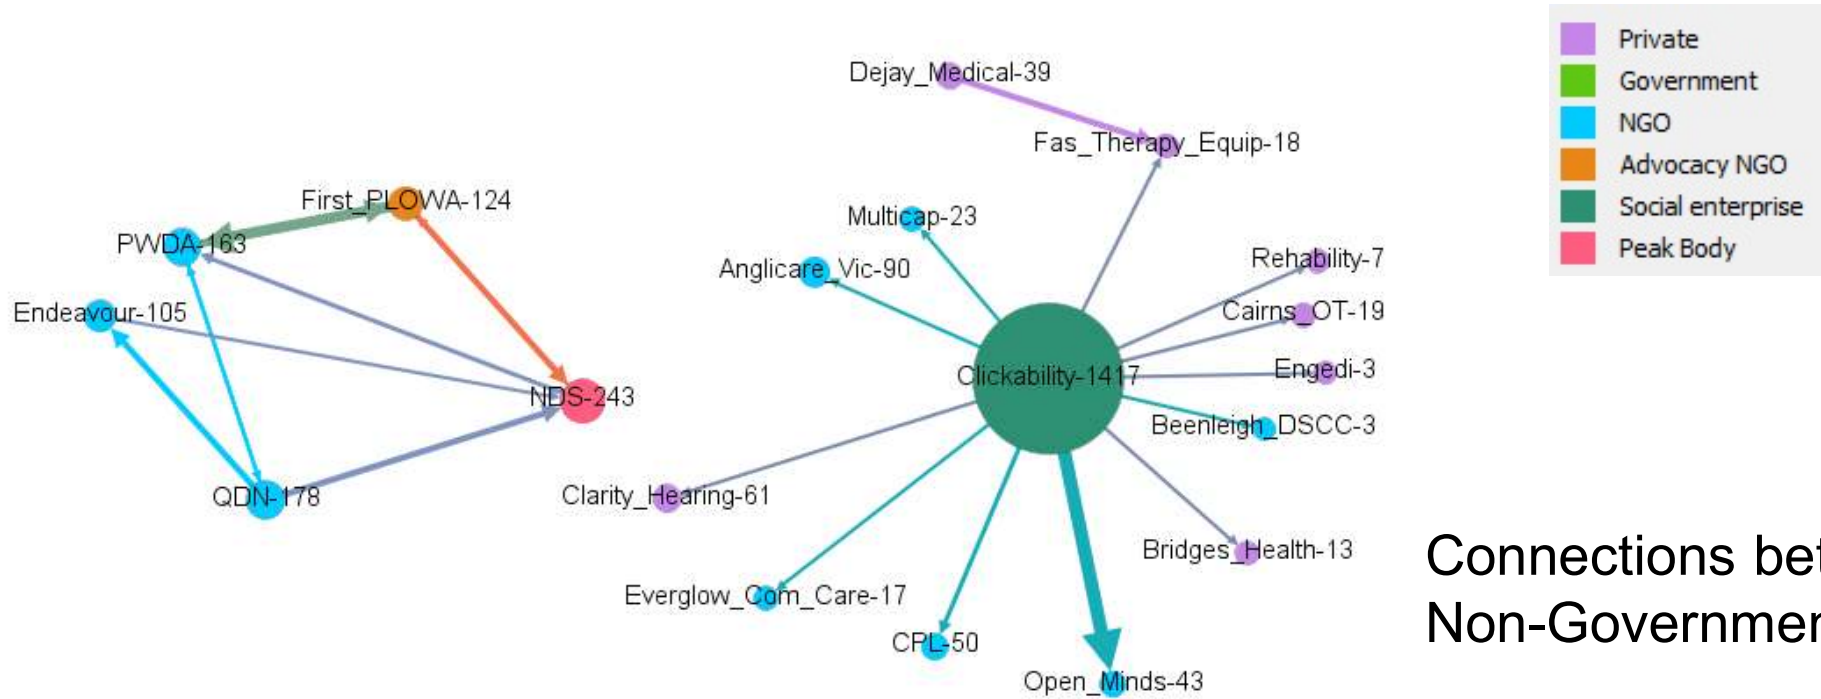

30/100 points to NDIA

Type	Number
NGO	10
Private	10
Government	7
Advocacy NGO	1
Peak Body	1
Social enterprise	1

NDIA only points to government/NGO/ Peak Body/Advocacy NGO

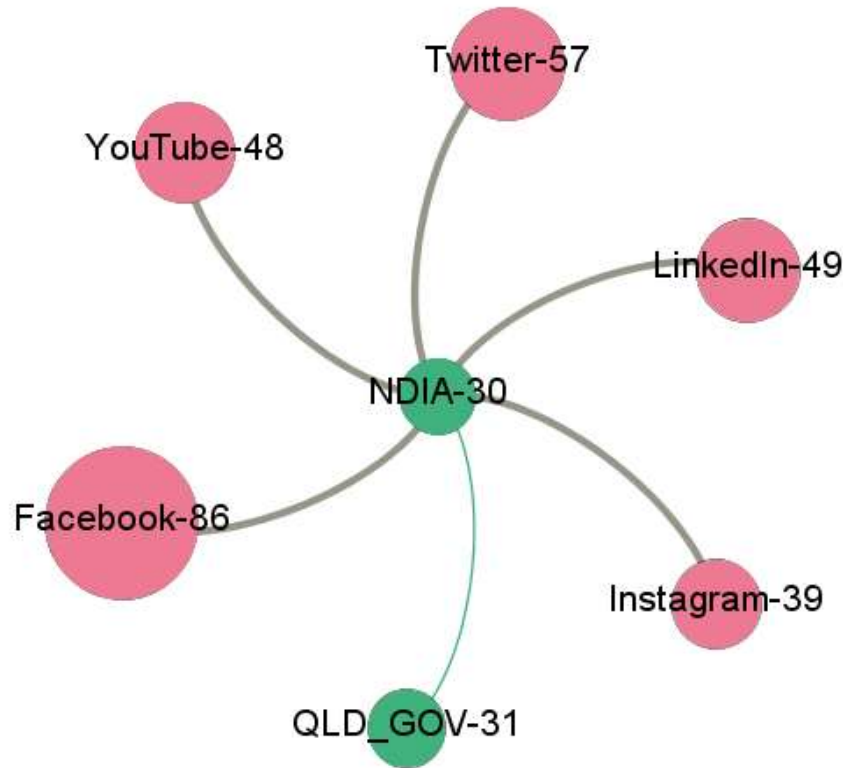

Connections between Non-Government websites

E.g.

- QDN → NDS / Endeavour
- PWDA → QDN
- NDS → PWDA
- Clickability → Others

Important websites with In-Degree ≥ 30
(meaning cited by others ≥ 30 times, the total
source number is 100)

Social Media plays an important
role among online organisational
networks

Next Steps

- Crawling 100 more randomly sampled NDIS registered service providers
- Analyse the network using social network metrics to identify centrality, importance, role of websites (hubs, authority)
- Use results to identify organisations for offline investigation
