A decade of change in days: Building more response and resilient services for individuals with developmental disabilities and their families

Bold ideas. Better solutions.

Metro South Health

A joint initiative of the
Division of Rehabilitation, Metro South Health, and
Menzies Health Institute Queensland, Griffith University.

A group of people, including men and women, are walking along a dirt path in a wooded area. They are wearing colorful, patterned hats and some are holding large flags. The flags include the Australian flag and the Torres Strait Islander flag. The scene is outdoors with trees and foliage in the background.

ACKNOWLEDGEMENT OF COUNTRY

Griffith University acknowledges the Traditional Custodians of the land on which we are meeting and pays respect to the Elders, past and present, and extends that respect to all Aboriginal and Torres Strait Islander people.

A community, looking for bold ideas and better solutions

- ~160,000 Australian's on the autism spectrum
- Lifelong disability that impacts learning and participation
- Magnitude of need evidenced by average NDIS support package of ~\$40,000 per annum

NDIS Quarterly Report (2019-20-Q2):
<https://www.ndis.gov.au/media/2128/download>

A community, already disadvantaged by distance

In Queensland:

- 56% of all Queenslanders accessing the NDIS resided in major cities
- 13% were living in locations with populations less than 15,000.

NDIS Quarterly Report (2019-20-Q2):

Telehealth has
long been
considered a
promising
solution

Evidence (over decades) for the potential

- Systematic Review
- 14 studies (284 participants)
- Ages (19 months, adults)
- Services:
 - Diagnostic assessments
 - Early intervention services
 - Anxiety and functional behaviour assessment
- Findings:
 - Equivalent to face-to-face
 - Superior to comparison groups without intervention

International Journal of Speech-Language Pathology, 2018; 20: 324–336

ORIGINAL ARTICLE

Telehealth and autism: A systematic search and review of the literature

REBECCA SUTHERLAND¹, DAVID TREMBATH² & JACQUELINE ROBERTS¹

¹Griffith University Arts Education and Law – Autism Centre of Excellence, Griffith University, Mount Gravatt, Australia and ²Menzies Health Institute Queensland, Gold Coast, Australia

Abstract

Purpose: Research interest in telehealth and autism spectrum disorder (ASD) has grown. There is a need to review the literature to allow speech-language pathologists (SLPs) and other service providers to consider applicability to their settings. The aim of this review was to examine the nature and outcomes of studies examining telehealth assessment and/or intervention in ASD.

Method: A systematic search of the literature was undertaken, with 14 studies meeting inclusion criteria. The authors extracted information from each included article, including participant characteristics, technology used, measures and reported outcomes. Quality review of articles was undertaken.

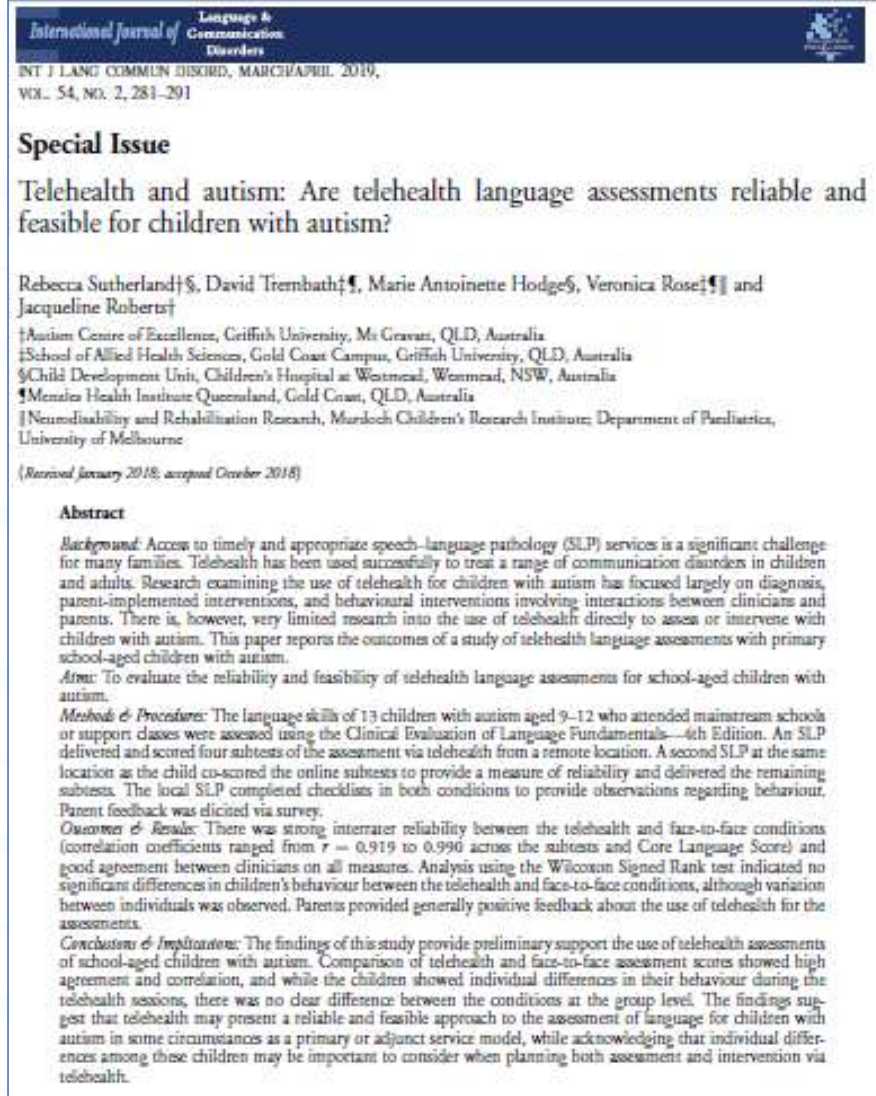

Result: The 284 participants with ASD across the 14 included studies ranged in age from 19 months to adulthood. The quality of the studies varied. A range of services were provided via telehealth, including diagnostic assessments, early intervention and language therapy. Results suggested that services delivered via telehealth were equivalent to services delivered face to face, and superior to comparison groups without telehealth sessions.

Conclusion: The findings suggest there may be a range of benefits in using telehealth with individuals with ASD, their families, and teachers. Further research, however, is required particularly regarding the use of telehealth directly with children with ASD for assessment and intervention.

Keywords: autism spectrum disorder; telehealth; speech-language pathology

Evidence (example)

- Aim: To evaluate reliability and feasibility of telehealth language assessments
- Method:
 - 13 children with autism (age 9-12 years)
 - Speech Pathologist delivered 4 subtests via telehealth and completed scoring
 - A second speech pathologists at the child's location also completed scoring

Evidence (example)

Table 2. Correlation coefficients for the Clinical Evaluation of Language Fundamentals—4th edition (CELF-4) subtest scaled scores

Test	<i>n</i>	Correlation	<i>p</i> -value
Core Language Score	13	.993	<0.01
Concepts and Following Directions	13	.967	<0.01
Recalling Sentences	13	.989	<0.01
Formulated Sentences	13	.943	<0.01
Word Classes—Total	13	.965	<0.01

Table 3. Parent comments regarding satisfaction

Parent number	Comment
1	Very easy assessment but very comprehensive. My son really enjoyed the whole assessment. He loves computers and telephoning friends etc. so this was a great fit!
2	Had to think when doing anything and appeared unsure, appeared nervous as well
5	I think it is great and will help a lot of people
6	Anything that gets more information about children's well-being is a must for any parents or carers
7	I think the audio was a bit poor and (child) may have been having trouble understanding, otherwise it was good
10	I think (child) particularly enjoyed participating in the assessment via the webcam
12	If no technology issues, seems as good as an in-person assessment
13	This interesting to question and answers on computer [<i>sic</i>]

Two people in NSW have contracted COVID-19 despite not having travelled overseas.

A decade of
change in days

Partner: Autism Queensland

- Lead agency providing services across the lifespan
- ~3,500 people accessed services in 2019
- ~300 staff
- Just over half of clients transitioned to telehealth in a matter of weeks

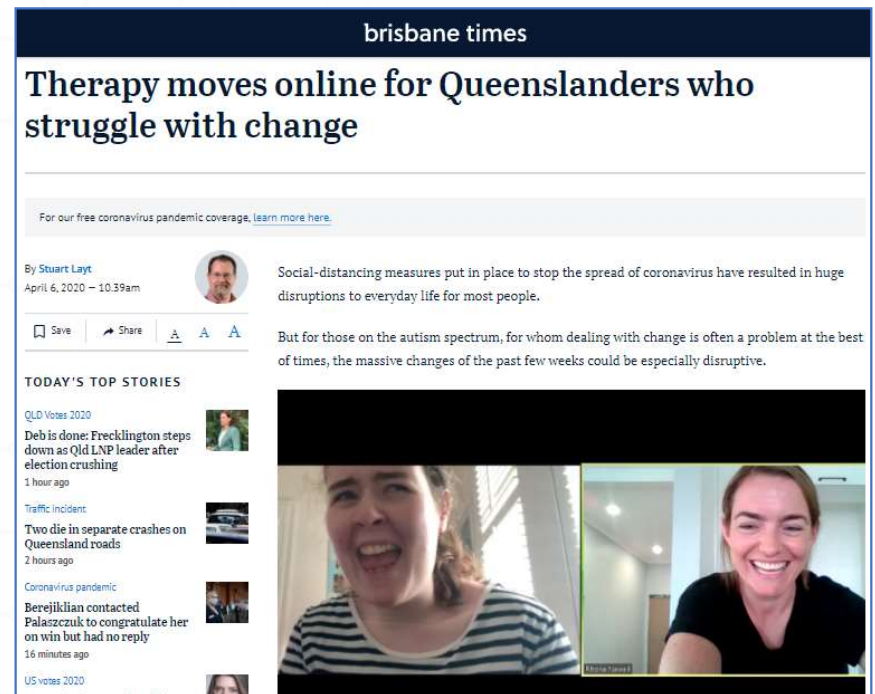

<https://www.brisbanetimes.com.au/national/queensland/therapy-moves-online-for-queenslanders-who-struggle-with-change-20200403-p54gum.html>

Partner: Autism Queensland

"We had actually planned this year to develop teletherapy to help address our long wait-lists of people wanting to access our service. But this really sped that up. What was going to be a year-long project has become a month-long one."

(Pam Macrossan, CEO)

SBS News

As disability services adapt to the coronavirus pandemic, calls are coming to keep the changes in place

Brothers Oscar and Archie, both of whom have autism, have used online disability services during the coronavirus

“Not just has this worked in terms of reducing the infection amongst people with disability... Many clients and their supporters and families are actually come to telehealth as being a preferred model of service delivery”

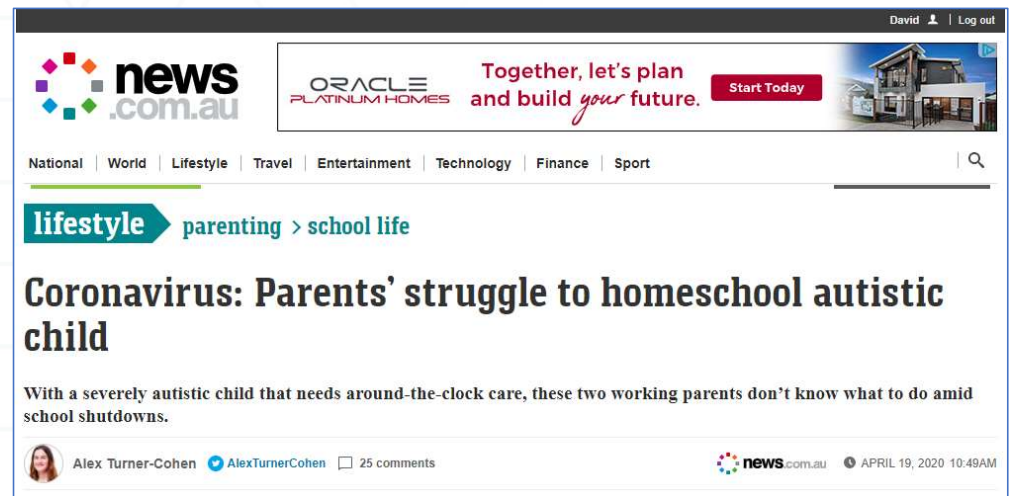

(David Moody, CEO, National Disability Services)

Community outcomes (Mixed)

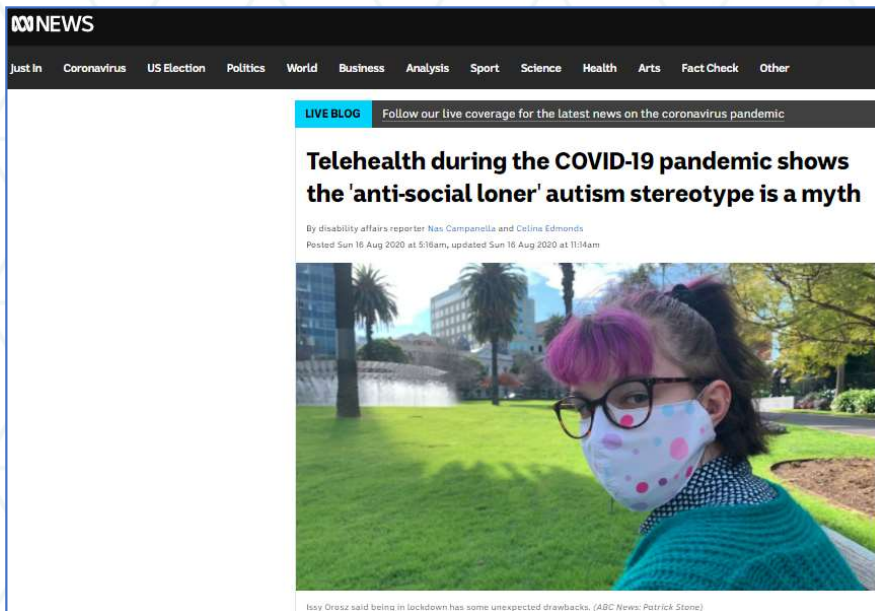

It doesn't feel like an appropriate therapy environment because I'm in the same space all the time and [it's] harder when you aren't walking into a therapist's office. It further reduced my feeling of support and my ability to healthily vent what was happening and get those extra skills and help in a time when I probably needed it more."

Charity says internet access as vital as power, water during pandemic

For our free coronavirus pandemic coverage, [learn more here.](#)

By Stuart Layt
August 27, 2020 - 3:38pm

Queenslanders are being asked to donate old phones, laptops and desktop computers to ensure disadvantaged people have access to the internet and digital services during the pandemic.

The [Australian Digital Inclusion Index report for 2019](#) lists Queensland fifth out of the seven states and territories for digital inclusion, the measure of how many people in the state have access to the internet for everyday activities.

TODAY'S TOP STORIES

“If you want people to connect with the GP, their psychiatrist, or psychologist, that all requires you to have a device that workable and enough data to be able to do it”

(Page Armstrong, Chief Executive, Queenslanders with Disability Network)

Next steps

We need to work together to:

1. Understand what has and has not worked
2. Identify and extend the most effective models
3. Ensure that policy, higher education, and workforce development are aligned with community expectations
4. Learn from and enable the experts: people living with disability themselves
