

get involved

Disability and rehabilitation research often hides behind the more exciting scientific discoveries and cures that dominate the news. It is our research that identifies the need for innovation, because we work directly with people who have disability, their families, practitioners, policy-makers and service organisations.

Help us spread the word about how important it is to value the voice of people with disability in all decision-making and discovery.

We need your support to design high-quality solutions, services and systems that can improve the lives of so many people.

our hubs

Our philosophy is to bring people with lived experience and practising clinicians together with experienced researchers to learn from each other and form innovative research teams. It underpins our ongoing commitment to close-to-practice, ground-up research and finding solutions to complex problems that create positive change in the real world.

Be part of making a difference

who we are

The Hopkins Centre is a leading translational research centre in the field of rehabilitation and severe disability. We are renowned for our research methods that bring people with disability and their families, clinicians and practitioners, policy-makers and researchers together to develop practical solutions that promote measurable improvements in quality of life.

our mission

Finding solutions to complex challenges through interdisciplinary collaborative and responsive research that is embedded in practice.

Exploring bold ideas and better solutions for the future.

our values

Believing in, celebrating and striving for:

our namesake

The Hopkins Centre is named after Dr. Paul Hopkins AO, a rehabilitation physician who changed the face of rehabilitation in Queensland.

The Centre is crafted on his values and his pursuit of person-centred practice to maintain the dignity of people with disability.

specialising in five core populations

research programs

-  Evidence-based Practices and Community Supports
-  Enabling Technology and Environments
-  Musculoskeletal Health and Rehabilitation
-  Child Health, Learning and Disability

what makes us different

- ✓ Trust and relevance built on twenty-five years of research embedded in service delivery and community.
- ✓ Solutions that are grounded in collaborative partnerships between people with disability and families, clinicians, policy-makers and researchers.
- ✓ Making a difference through a commitment to engaging people with disability in research.
